
(a) Floe A (1.2β_0, 0.97R_0): linearised estimates
$\times 10^{-3}$
F^{-1} 1σ
95% ellipse
Welch-expected bias
nonlinear estimate
Δ ln R (from truth)
Δ ln β (from truth)

(b) Floe A: calibration of reported uncertainty
empirical CDF
χ^2_2 (ideal)
G3a oracle
G3b jackknife (Hartlap)
G3b pooled jackknife (Hartlap)
G3c $\Sigma(p_0)$
q = $\Delta\theta^T$ C^{-1} $\Delta\theta$

(c) Floe B (0.8β_0, 1.03R_0): linearised estimates
$\times 10^{-3}$
F^{-1} 1σ
95% ellipse
Welch-expected bias
nonlinear estimate
Δ ln R (from truth)
Δ ln β (from truth)

(d) Floe B: calibration of reported uncertainty
empirical CDF
χ^2_2 (ideal)
G3a oracle
G3b jackknife (Hartlap)
G3b pooled jackknife (Hartlap)
G3c $\Sigma(p_0)$
q = $\Delta\theta^T$ C^{-1} $\Delta\theta$
